

PAINWEEKEND™

*Pain Management for
the Main Street Practitioner*

April 27, 2019

Charlotte, NC

Target audience

The educational design of this activity addresses the needs of frontline clinicians: physicians, nurses, nurse practitioners, physician assistants, and pharmacists involved in managing acute and chronic pain.

Current clinical climate

Whether you're in a hospital or office-based practice, chronic pain patients are everywhere—and YOU are absorbing the burden of their care.

Don't run out the back door when a pain patient calls on you—the family practitioner or pain specialist. So many people need your help, and you will get through the current controversies on pain management. Stick with it, learn your licensing board rules and guidelines, and try to follow them. Make your own compliance checklist and really think about what you're documenting. Make sure that you plan ahead and have a valid demonstration of best practices.

— Jennifer Bolen JD—Founder, Legal Side of Pain

The PAINWeekEnd agenda is purposely constructed for the busy clinician, delivering relevant, practical information, together with the opportunity for interaction and exchange with faculty and fellow attendees.

Pain Management for the Main Street Practitioner has been created to streamline the clutter of information on assessment, evolving guidelines, risk management, and changing reimbursement scenarios. Join us for clinical, legal, and practice management CE/CME designed expressly for frontline clinicians. Participants can receive 6.0 CME/CE credits as they expand their capabilities in the assessment, diagnosis, and management of chronic pain conditions.

PAINWeekEnd Regional Conferences are produced by PAINWeek®—the leading pain education resource for frontline practitioners. Chronic pain is a major public health issue and a challenge that primary care clinicians face every day as they absorb the burden of care for aging baby boomers.

Faculty

David M. Glick DC, DAAPM, CPE, FASPE

CEO & Medical Director

HealthQ2

Richmond, VA

Gary W. Jay MD, FAAPM

Clinical Professor

University of North Carolina

Department of Neurology

Chapel Hill, NC

Alexandra McPherson PHARM.D, MPH

Palliative Care Clinical Pharmacy Specialist

MedStar Washington Hospital Center

Washington, DC

Educational objectives

By participating in PAINWeekEnd, you will be able to:

- Explore the multifactorial issues contributing to the opioid crisis
- Evaluate treatment safety and efficacy of COX-2 Inhibitors for the management of chronic pain
- Differentiate between nociceptive and neuropathic pain
- Identify the pathophysiology of migraine headache
- Describe the mechanism of action of common nonprescription analgesics
- Identify basic studies used for the diagnosis of pain disorders

This activity is provided by Global Education Group

6.0 CME/CE hours will be provided by
Global Education Group
